

LuOcean Mini 4

LU1064Dyyy Diode Laser with up to 65 W at 1064nm

Description:

The Lumics LuOcean Mini 4 diode laser series offers OEM integrators an excellent product to manufacture state-of-the-art end-user laser systems.

The easy integration and safe use of these laser components in combination with several accessories and features give the chance to be cost-efficient in development and manufacturing.

Features & Functions:

- Wavelength 1064nm
- (105/200/400/600) μ m NA 0.22 fiber
- Emitter electrically in series
- Temperature sensor

Options:

- Exchangeable window
- Red or green pilot
- Fiber & Power monitor
- OEM LD driver & cooler
- Controllable pilot intensity

Benefits:

- Single emitter long lifetime
- Passive cooling
- Sealed housing
- Small foot print
- SMA connector

Applications:

- Therapeutic
- Dental
- Dermatology
- Veterinary
- Pumping

Module Drawing (Dimensions in mm)

Connector - laser diode supply

TM Molex connector (Part No. 172064-0006). Pin connection dependant on individual electro-optical configuration. Maximum current per pin is 26 A if total current to cathode exceeds 26 A two pins must be connected to cathode of driver board

Counterparts for external cable

Molex Mega-Fit Receptacle Housing Part No. 171692-0106

Molex Mega-Fit Female Crimp Terminal

Part No. 76823-0322

Connector - signals

Connector on laser module Part No. (Mini revision 3 3M 159112-5012) (Mini revision 4 with locking Molex 87833-1273)

Counterpart for external cable

Molex Milli Grid Cable to Board Receptacle

Part No. 87568-1273 with locking ramp.

Flat ribbon cable with pitch of 1mm and AWG28

Notes

* taken at internal temperature sensor - power drop read note (3) ** we recommend to operate the laser above dew point

(1) Power is measured ex fiber according to given fiber specifications including measures and tolerances of fiber and ferrules for uncoated fiber facets.

Given value is the maximum power level. For given max. power level operating current and voltage can deviate by max.10% from typical values and is lower than maximum values. Please choose your laser driver design accordingly.

(2) Do not exceed maximum forward current for rated power as given above by more than 5% otherwise the laser diode may be damaged.

(3) Rule of thumb: Power ex fiber decreases up to 5% (<1100nm) and up to 7% (>1400nm) every 10 °C temperature increase at internal temperature sensor. Lifetime decreases by about factor of two every 10 °C.

(4) Required flatness of customer heat sink 0.05mm over 100mm.

(5) Red and green minimum pilot power is set at factory by customer request. Standard is 1 mW.

(6) Adjust trimpot R6 when Intensity pin 10 control is left open.

(7) Adjust trimpot R4 to achieve 0%-100% pilot intensity for 5V to 0V at pin 10.

(8) Calculation example of thermal load and necessary thermal resistance of heat sink to maintain internal diode temperature of 25°C :

Thermal load = Output power * (1/conversion efficiency - 1)

Heat sink thermal resistance = (25 °C - ambient temperature) / thermal load

Example: Output power: 22 W, Conversion efficiency: 0.22, Thermal resistance between bottom of module to internal temperature sensor: 0.1 K/W, Internal temperature: 25 °C

Thermal load = 22 W * (1/0.22 - 1) ~ 80 W , Heat sink thermal resistance = (25 °C - 20 °C) / 80 W = 0.06 K/W

General Parameters / Accessories

Internal operating * and (Ambient) temp , c.w.-operation **	T _{op c.w.}	10(5)	35(40)	°C	
Humidity / Non-condensing Atmosphere			90	%	
Thermal heat sink resistance			0.1	k/W	
Maximum fiber flange temperature			50	°C	
Weight		160		g	
Compliance			CE, ROHS		

Further Options (Please ask for quotation if needed)

Optical fiber patchcord, Laser diode drivers for each individual wavelength, Interface cable , OEM laser diode driver and temperature controller

* taken at internal temperature sensor ** we recommend to operate the laser above dew point. Below dew point water condensation on the exit window may damage the window when laser is switched on. If the module was stored below dew point before operation dry the window by pre-heating the module to 25°C

User Safety

Important Note Read and carefully follow operating manual instructions. Especially, whenever power supply is switched on or off, always disconnect from laser module. See manual for details. Uncontrolled on / off switching may cause spikes and result in fatal device damage. This product is not certified by with IEC 60825-1 or 21CFR1040.10/ 21CFR1040.11 and must comply with the applicable regulations by the Purchaser if sold as laser product.

We manufacture diode lasers.

Fiber Connector

(1) Lumics laser diode fiber coupling technology ensures loss into the fiber cladding of <2% of the total power if the fiber centricity is below 10µm and ferrule diameter and distance of the fiber end facet to the reference plane complies with shown technical drawing. Use a fiber microscope to check for dust free fiber end facet and fiber centricity.

(2) Free standing fibers suffer from higher risk of fiber damage to the fiber tip due to mechanical stress by handling and the fiber end facet can not be polished as simple as for not free standing fibers.
